

Agenda **Multimedia Workshop**

Tuesday, March 14
7:30p.m. - 9:00 p.m.

Learning Objectives:

- Participants will obtain a better understanding on how to prepare visual materials for use on websites. Specifically:
 - Basic Photography
 - Digital Image Processing
 - Basic Digital Video
 - 360-Degree Panoramas
 - Basic and Advanced Web Site Development

Presenter: Gary Grimm and Katy Flanagan, Mountain Visions

Mountain Visions specializes in creating immersive, interactive, 360 degree photographic and audio-visual "virtual explorations" of outdoor landscapes for collaborative partnership groups, and sometimes for natural resource groups. Gary and Katy have been doing this work for almost 30 years and their associates have come to understand that these unique "participatory digital environments" can greatly expand awareness, understanding and increased public involvement in complex and scientific natural resource issues.

Mountain Visions has started the development of an Interactive Web site for the Jamaica Protected Area Trust (JPAT). As a part of this development, educational workshops and training will be provided to help people participate in the process of contributing to the web site. One of these efforts will be to present information to participants at the Conservation Training Week (CTW) in 2006. JPAT web site: <http://www.jpat-jm.net/>

Throughout the week, Mountain Visions will maintain a Conservation Network Center to allow Conservation Training Week participants an opportunity to see demonstrations on the interactive and participatory sections of the Conservation Network Center. The topics will include:

1. Discussion Forum
2. Calendar of Events
3. Educational Activities
4. Volunteer Opportunities
5. Project Monitoring
6. Public Input
7. Resource Sharing
8. Reference Library.
